nfi, you have to shoot down the dreambox and flash it with new image, the same way you update secondstage-dm800-84.. You do this the same way you flash image, with browser Here is how to do that: After you have updated secondstage-dm800-84.. SIM2-SSL84b-TSimage-1 0 0-DM800HD-OE 1 6 For clone sim2 The image you are using is so old that you have to flash a new second stage loader for dm800.. nfi The new stable newnigma2 4 0 4 image you can download from here: I don't know what bacup you can take from the old image you are using, so I have install a compete new one.. Her it's a post you can read, and in this post there is the right CrossEPG Plugins to download and install.. (You can take backup of the line from the old image ) CrossEPG is easy to set up, you do this in a couple of minutes, after install the CrossEPG Plugins..
